

October 13, 2020

As club volleyball slowly returns, there are new policies and protocols that must be observed in an attempt to keep all attendees safe. One of these policies is the requirement of face coverings for all athletes; including those on the court. However, the SCVA acknowledges that masks are not the best option for athletes with diagnosed asthma. The ADA does ask that we offer a reasonable modification to the policy, however the SCVA does not feel comfortable with the athlete not wearing a mask at all. Thus, if a player has diagnosed asthma, then he/she may wear an open face shield instead. This face shield must be fitted around the face, such as:

An unfitted or unstructured face shield, as seen below, will NOT be accepted

Thank you,

SCVA
